

## Switch statement:

It differs from (if statement) that (if statement ) suits loops more and it's used in big cases more

Switch(expression) {

Case1:

Code block ;

Break;

Case2:

Code block ;

Break;

Case3:

Code block ;

Break;

Default:

Code block;

}

EX:

```
let usergov = prompt("enter your governerate");
switch(usergov){
  case "cairo":alert("10%");
  break;
  case "giza":alert("33%");
  break;
  case "alex":alert("50%");
  break;
  case "aswan":alert("30%");
  break;
  case "matrooh":alert("20%");
  break;
  default: alert("60%");
}
```
